Summary

Backend Software Developer specializing in C# and ASP.NET Core with professional experience in building RESTful APIs, GraphQL APIs, database-driven applications, and scalable backend systems. Experienced with multiple programming languages, including Python, C++, and JavaScript, with a strong foundation in software engineering principles and problem-solving. Combined freelance backend development with technical instruction and mentoring, helping aspiring developers build production-ready backend applications while delivering reliable and maintainable software solutions.

Skills

Languages & Technologies: C# • .NET • ASP.NET Core • ASP.NET Web API • ASP.NET MVC • GraphQL • JavaScript • HTML • CSS

Database Systems: SQL Server • PostgreSQL

ORM & Data Access: Entity Framework Core • Dapper • ADO.NET

Architecture & Design: Clean Architecture • Onion Architecture • Repository Pattern • Unit of Work • CQRS • Dependency Injection

Other Tools & Technologies: Git • GitHub • Docker • Redis • Jenkins • CI/CD • Unit Testing

Work Experience

Software Development Instructor

Oct 2025 – July 2026

Code Academy • Full-time

Baku, Azerbaijan

Technologies: C# • .NET • ASP.NET Core • Entity Framework Core • SQL Server • JavaScript

- Taught backend development to 50+ students across 3 cohorts in a 4-5 month, project-based program, leading 3 hours of the daily 6-hour sessions.
- Designed and maintained the backend curriculum, assigning 3+ homework tasks per week and preparing 4+ quizzes per cohort.
- Evaluated 30+ final projects through code reviews, technical interviews, and project presentations, providing continuous feedback.

Backend Developer

Jul 2025 – Jan 2026

OtaqAz

Baku, Azerbaijan

Technologies: C# • .NET • ASP.NET Core • GraphQL • PostgreSQL • Entity Framework Core • Dapper • Hangfire • MemoryCache • AWS S3 • Docker

- Developed the backend of a production real estate platform from scratch using ASP.NET Core, Entity Framework Core, GraphQL, and PostgreSQL, leveraging Dapper for performance-critical data access; the platform launched in ~3 months and now hosts 700+ listings.
- Designed a hybrid API on Onion Architecture: 45 GraphQL queries (with built-in paging, filtering, sorting, and projection) for flexible data fetching, and 200+ REST endpoints for business operations.
- Automated recurring business processes with Hangfire, including listing lifecycle management, premium/VIP scheduling, and routine maintenance tasks.
- Enhanced application performance by implementing MemoryCache for OTP validation and frequently accessed application data, reducing database load and improving response times.
- Integrated 5+ third-party services, including Kapital Bank payments and webhooks, AWS S3, Brevo email, and SMS.

Software Development Mentor

Jun 2025 – Jan 2026

Code Academy • Part-time

Baku, Azerbaijan

Technologies: C# • .NET • ASP.NET Core • Entity Framework Core • SQL Server • JavaScript

- Mentored 20+ aspiring backend developers, leading the weekly lab session and providing code reviews, debugging help, and one-on-one guidance throughout the program.
- Coached mentees on EF Core, SQL Server, and RESTful API design following clean architecture and clean code principles.

Projects

EnglishWithMovies

Feb 2025 – Mar 2025

Technologies: C# • ASP.NET Core • Entity Framework Core • SQL Server • SignalR • Hangfire • Stripe • Azure Blob Storage

Gamified language learning platform that helps users improve vocabulary through movie-based content with real-time interaction, subscriptions, and reward mechanisms.

- Built the backend of a gamified language-learning platform with ASP.NET Core, EF Core, and Repository Pattern (45+ entities, 200+ endpoints), including real-time notifications (SignalR), background jobs (Hangfire), and Stripe subscription payments.
- Developed gamification features (points, achievements, streaks, rewards) and integrated Azure Blob Storage for media.
- Wrote automated seed data generation populating 2,000+ records across multiple tables.

SmartLogistics

Aug 2025 – Oct 2025

Technologies: C# • .NET • ASP.NET Core • Entity Framework Core • SQL Server • Elasticsearch • WebSockets • JWT • Cloudinary

Startup project focused on building a scalable logistics management platform with real-time vehicle tracking and route monitoring.

- Developed backend features with ASP.NET Core, EF Core, and Layered Architecture in an Agile team of 6, using Git feature-branch workflow and Trello.
- Implemented real-time driver location tracking with SignalR and secured APIs with JWT authentication.
- Integrated Cloudinary for media management.

Education

Master's Degree in Data Science (Data Analytics)

Sep 2026 – July 2028 (Expected)

Azerbaijan Technical University

Baku, Azerbaijan

- Incoming Master's student in Data Science, specializing in Data Analytics, in an English-taught program.

Bachelor's Degree in Computer Science

Sep 2022 – July 2026

Azerbaijan Technical University

Baku, Azerbaijan

Grade/GPA: 80.8/100

- Participated in ICPC-style competitive programming contests, strengthening algorithmic thinking and problem-solving skills.
- Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Systems, Software Engineering.
- Applied software development concepts through academic projects, programming assignments, and collaborative team-based work.

Certifications & Awards

Backend Development, Peerstack Academy, Feb 2026

ASP.NET Core: SOLID and Clean Architecture, Udemy, May 2025

Software Development (Backend-focused Full-Stack), Code Academy, Apr 2025. High Honour Diploma; multiple hackathons.

ICPC Azerbaijan Qualification (2023), International Collegiate Programming Contest, Oct 2023
